Team Meeting Minutes

Date: 9 August 2026
Time: 17:00 (BST)
Platform: WhatsApp

Attendees

- Payman Ghorbani (pg25304@essex.ac.uk) — Chair
- Amnon Malka (am25251@essex.ac.uk)
- Bilge Malka (bb25161@essex.ac.uk)
- Donald Duodu (dd26928@essex.ac.uk)

1. Introductions

Team members introduced themselves briefly to establish initial working relationships.

2. Module Overview

The team reviewed the requirements and deadlines associated with the Development Team Project. The coursework requires groups of three to four students to select a specific cloud infrastructure framework, such as AWS CloudFormation, Microsoft Azure Resource Manager, or Google Cloud Deployment Manager, and to produce a report covering the following areas.

1. Overview, providing a description of the chosen framework, its core features and its purpose.
2. Service model analysis, explaining how the framework supports different cloud service models such as IaaS, PaaS and SaaS.
3. Deployment types, discussing how the framework can be applied across public, private and hybrid cloud environments.
4. Infrastructure design, outlining the steps involved in designing a basic infrastructure using the chosen framework, including key components such as compute, storage and networking.
5. A case study or real-world example, evaluating how the framework has been applied in practice and its impact on organisational efficiency and cost.

3. Communication

The team discussed and agreed on a primary communication platform. It was decided that Microsoft Teams would be used going forward in place of WhatsApp, in order to maintain a more formal approach to team meetings. The team also agreed to use Microsoft SharePoint as the central location for storing project documents. Payman agreed to set up the SharePoint site structure. However, regular day-to-day engagement will be via WhatsApp group chat.

4. Team Organisation

The team discussed the coursework requirements and expectations in further detail and agreed to focus the report on Azure Resource Manager as the chosen cloud infrastructure framework.

5. Project Planning

The team reviewed the project brief and identified the initial tasks required to begin the assignment. It was agreed that each section of the report should be limited to approximately 250 words, in order to maintain consistency across the document and ensure the report remains within the overall word count. Team members will upload their completed sections to SharePoint, and Payman will be responsible for compiling and consolidating the final report once all sections have been submitted. Responsibilities were allocated as follows.

- Donald: Real world case study
- Amnon: Overview and service model analysis
- Payman: Infrastructure design
- Bilge: Deployment types

6. Next Meeting

No date was agreed for the next meeting. The team agreed to continue discussions and share progress updates via WhatsApp in the interim, and to schedule a further meeting if and when required.
